The DDRS-AFS Second Quarter Release 6.2: A little bit of change means a lot of improvement!

The DDRS-AFS System has yet again been retooled and upgraded for your enjoyment.

This is not our usual laundry list of changes, but we know these enhancements will help you all tremendously.

Here are the enhancements we would like to share with everyone:

1. We now have a **Footnote Trend Analysis Report**. No, you are not dreaming; No, we are not lying. This report works just like the Statement Trend report and has all the same excellent drilldowns.

2. We are not finished with Footnotes: We now have a **Footnote Update Log**. This report records the date and time a footnote was updated. It even shows the userid of the user who did the updating. This is a handy tool…It also serves as a warning to anyone who thought it was fun to clear their neighbor's text from the footnote: your neighbor will now be able to see that you did it…

3. To make balancing an import sheet easier we have a **Trial Balance Import Report** that will show you what you imported into the system, even if it is out of balance. It is a report of what is on the Trial Balance Input screen.

4. For all the Big Spenders we have added **an extra signature line to the JV Signature form** for JVs over 100 million dollars.
